

Specification

Hardware	Screen	N/A
	Memory	N/A
	Storage	N/A
	Data interface	USB
Software	OS	Windows7 64 bit
	Software	P media software
Environment	Working temperature	-10°C - 55°C
Structure	Dimension	250mm*230mm*80mm
	Weight	1.3kg
Interface	Self locking power	With self-locking power cable, which can avoid the accident shutdown
	Working power	Intelligent temperature control, normal voltage: AC100V—240V~50/60HZ
	Network	One RJ45
	USB	4 USB 3.0
Function	Automatically backup	When BWC connect to the terminal, it will backup all the video, audio, pictures and log file automatically.

2MPC-DAT-6

Data Acquisition Terminal

Specification

Empty from this interface firstly. Empty The terminal will empty all the data in the BWC when the backup finished. Recharging When BWC inserted into the terminal, it will recharging automatically. During the backup progress, it can display the device id, name, group, storage space, backup status and so on. When all the data finished backup, the terminal will archive and classify all the data based on recording date/time, device number, username, group name, video type, and video size and so on. When the BWC automatically. Remark file The authorized user can login the software to make a mark or description for any of the file that he has the authority. The authorized people can login the software to search any files based on recording date/time, uploaded date/time, unit number, officer name, group name, file type, data level, remark info and so on. The authorized people can login the software to playback any video he have searched, and it support playback full screen, forward and back, pause and so on. Download The authorized people can login the software and download the video from the center server to local PC. Data Empty The system will delete all the unmarked video and old data automatically based on a certain time. All the marked video files will upload to the center server automatically based on the grade and network status. The system can give the report based on office number, unit number, officer name, group name, file type, data type, upload time, important grade and so on. Upgrade The authorized people can upgrade the terminal remotely, or upgrade it locally by loading the software through USB. Backup The terminal can backup all the file manually System log System will record all operation log of the terminal. When the terminal has something wrong or the specie less than 100GB, it will give sound alarm warning.			Specification
Empty The terminal will empty all the data in the BWC when the backup finished. Recharging When BWC inserted into the terminal, it will recharging automatically. Status display Status display Buring the backup progress, it can display the device id, name, group, storage space, backup status and so on. When all the data finished backup, the terminal will archive and classify all the data based on recording date/time, device number, username, group name, video type, and video size and so on. When the BWC associated with one user, the terminal can read the data from this BWC automatically. The authorized user can login the software to make a mark or description for any of the file that he has the authority. The authorized people can login the software to search any files based on recording date/time, uploaded date/time, unit number, officer number, officer name, group name, file type, data level, remark info and so on. The authorized people can login the software to playback any video he have searched, and it support playback full screen, forward and back, pause and so on. The authorized people can login the software and download the video from the center server to local PC. The system will delete all the unmarked video and old data automatically based on a certain time. Upload Sate Sate will delete all the unmarked video and old data automatically based on the grade and network status. The system will delete all the unmarked video and send the pictures to any terminal in the network. The system can give the report based on office number, unit number, officer name, group name, file type, data type, upload time, important grade and so on. Upgrade The authorized people can upgrade the terminal remotely, or upgrade it locally by loading the software through USB. The terminal can backup all the data automatically, also, center server can remote backup all the file manually System log System will record all operation log of the terminal.	Function	Priority backup	The terminal has one priority backup channel; it will back up the data from this interface firstly.
Status display During the backup progress, it can display the device id, name, group, storage space, backup status and so on. When all the data finished backup, the terminal will archive and classify all the data based on recording date/time, device number, username, group name, video type, and video size and so on. When the BWC associated with one user, the terminal can read the data from this BWC automatically. Specification

	T	
	Backup time	10 channel can be finished in 60 minutes.
	Recharging	10 channels BWC can finish recharging in 6 hours and 45 minutes.
	Security	Only authorized people can access the terminal to backup data.
	Working time	7*24 hours continue working
	Power saving	When the screen is cover over, it will shutdown automatically, when it open, it will startup automatically.
	ON/OFF	The screen support 90 degree vertical turn
Quality	Certification	National report, CCC certification

Description:

Automated microphrocessor controller holds 6 units of body cameras at one time for charging and downloading data, software

included.. Support 4 channel multifunction usb port, support 10 channel data backup simultaneously. When the data backup finished, it can format the storage of body worn camera automatically, All recorded files, video, audio, pictures and log files manually or auto setup. Upload time is configurable. Auto recharging within 6.5 hours. Secure terminal only authorized personals.
